

Epoxy Putty

2-in-1 Fast Curing Epoxy

Nanotechnology

Thank you for choosing our fast curing 2-in-1 epoxy putty! We are thrilled that you recognize the innovative power of our material technology and its potential to revolutionize your industry. Our fast curing 2-in-1 epoxy adhesive is designed to provide exceptional strength and adhesion (fully cured in 10 minutes), durability, and performance, above and underwater. We appreciate your trust in our product and look forward to supporting your future projects. Our fast-curing epoxy dramatically cuts down on wait times, allowing you to complete projects faster and boost your overall productivity.

Instructions for optimal conductivity and adhesion results:

- Clean and prepare the surface well before applying the epoxy putty.
- Prepare the mixture of A and B putty parts to 1:1 ratio by volume not weight
- Mix it with hands carefully and thoroughly.
- Apply the mix onto the required surface and spread it well to ensure full coverage and strong adhesion.
- The working time for the epoxy to start hardening is [2 minutes] @ 72°F. Fully cured in [10 minutes].
- The resulted hardened epoxy color will be off-white.
- Follow above steps for underwater (submerged) and above environments.

Storage and usage instructions:

- Store this product in cool, dry and dark place.
- This product is waterproof and will be hard to remove once cure, it is highly recommend cleaning it with soap and water fast before cured. Using (Rubbing Alcohol) will be more effective.
- To prevent the epoxy from drying out, ensure wrap part A and B parts with plastic wraps after each use. Make sure no air or moisture is trapped within the warped parts. Moisture can activate a crystallizing process for these parts even if not mixed.
- The fully cured epoxy can handle up to [120 °C/ 248 °F]. Do not use for environment with higher temperatures.
- This epoxy is 2-in-1 product which means it can be used underwater (submerged) and above.
- For indoor/outdoor. This product is a waterproof once fully cure.
